

ABSTRACT OF THE DISCLOSURE

A soft furnishing assembly and method for its construction. The assembly comprises an intermediate portion having opposed ends and at least one end portion connected to an end of the
5 intermediate portion. The end portion is connected by a frangible portion wherein the end portion is movable between a first position in which the soft furnishing assembly is substantially flat and a second position in which the end portion angularly abuts an adjacent end of the intermediate portion and the frangible portion is broken.
